

100

Some people cheerfully cling to the opinion that the Democratic party will not dare legislate in accordance with the pledges and recommendations of the Chicago platform. It is not a very courageous party, to be sure, and when it moves it seldom has its face turned towards the beckoning hand of progress. On the contrary, it seems to have a loving fondness for the past and the dead and buried things thereof. It is great as an example in the art of standing still. It is quite ready to pull down and destroy, and if such of its leaders as Henry Watterson have full swing, there will be a display of fire-works that will not conduce to everybody's delight. How soon, we wonder, will Henry begin to "rip up" and "exterminate" protection, which seems to make the man so viciously mad? A flaming red rag flung in the face of the monarch of the barnyard would be comparatively tame in its results. Now that victory has perched upon Watterson's banner perhaps he will simmer down and be mollified. Then he will not be dangerous as an exterminator. Success is a tranquillizer. Give a Democrat an office, which seems to be the crowning object of his patriotic desire, and straightway he becomes lamb-like and content, "like a pensive on a monument smiling at grief." The Democratic party is a great braggart, and mighty in discovering the iniquities of its foe, but when it comes to putting its worst convictions into legislative practice it is as cowardly as the soul of a goose.

Some of the leading Democrats are mixing anxiety with their jubilation. In New York, especially, there are signs of trepidation. The results of the recent election have already become a source of fears, and even some among those who were so free in denouncing the McKinley bill as the "sum of all villainies," are openly protesting that no important change is to be made in the economic policy of the Government. Even those who were desperately bent on ripping up and annihilating have sobered down, and are now advising moderation. Before the election there was a horrible cry about the way the Republican policy was augmenting the riches of the rich and the poverty of the poor. Many people believed this stupid nonsense and helped make the Democratic victory possible. What will these people think when they realize that the triumphant party is willing to allow their distress and misery to continue? They have a good deal yet to learn about "ways that are dark and tricks that are vain" in the bewildering game of politics.

The Republicans of Bristol can congratulate Mr. Wanger on his election as a member of Congress, and Mr. Wanger can reciprocate the compliment by thanking the Republicans of Bristol for their loyal support and their enthusiastic endeavors in his behalf. Mr. Wanger's majority in the district was one hundred and ninety-three; his majority in Bristol was one hundred and ninety. Quite important in shaping the result was the vote of the old borough. The protected industries of Bristol will have a voice in Congress, as well as a vote, and a single vote is sometimes a very momentous factor in determining a question. But even if Mr. Wanger should realize the misfortune of being in a partially powerless minority, we want him in Congress and are glad he will be there.

IN JUST about a fortnight less than four years from to-day, the Democratic party, great in the facility of doing nothing, mighty potential as a blunderer, will have been thoroughly tried and forcibly found wanting. In consequence thereof a disgusted and disappointed people will again rise in its majesty, calmly step up to the ballot-box, and quietly hurl the incompetent party from power. It will then be the pleasing duty of the Republican party once more to assume the responsibility of control, and carry the Nation proudly forward towards its great destiny in the shining highway of progress, activity and glory. Let us be patient. "All things come round to him who will but wait."

Let not our people forget to feel duly and deeply thankful for the care which the Street committee of the Borough Council have shown in having the fallen leaves cleared away. That was an excellent piece of work and a credit to the town. Good streets, clean streets, neatness everywhere, play an important part in fashioning the reputation of a place. Attractiveness owes a large debt to tidiness.

There are now six comets visible in the nocturnal skies, not to the eyes of ordinary mortals but to the celestial vision of astronomers. One of these comets is said to be much brighter on its north side than on the southern portion. In this respect it resembles the American Union.

THE SCOTCH EARL OF CRAWFORD and his entourage, in full regalia, and in a carriage, arrived in Bristol on Monday morning. He has just made the startling discovery that the Democratic party represents "the brains and conscience of the country." This will be droll news to the average member of that party. Perhaps the fire-fly would be willing, with a little persuasion, to modify his conclusion by excepting incomparable Tammany, the shot-gun heathen of the South, and the low-down Democratic editor.

A book recently published by the J. B. Lippincott Company, having for its title "Recent Rambles, or In Touch with Nature," deserves special notice through the promptings of local pride, for the book claims Bristol as its birthplace. The author is Charles C. Abbott, M. D., who resides on Cedar St., and who holds a professorship at the University of Pennsylvania. Dr. Abbott is the author of other works similar in their character to this new offering of his free and dainty pen.

This book contains three hundred and thirty pages, including the useful and attractive index, and is a compilation of thirty-one chapters or essays. The majority of them cover less than a dozen pages apiece, and each one has its own fitting title. The table of contents was the eye by reason of the variety and terseness of the titles, which have a pithy expressiveness in excellent keeping with the charming simplicity of the substance of the volume. The following are given as examples: "In Touch with Nature," "A Winter Cat-Bird," "A River View," "A Recent Ramble," "May-day out of Town," "All Day Afloat," "In a Sea-side Forest," "A Cool, Gray Day," "Caught in the Rain," "An August Reverie," "Why do some Birds Sing?"

The book is very prettily illustrated and in the nineteen felicitous pictures of nature which adorn it, and delicate examples of the prototype process, the topics of the work seem mutely to express themselves to the searching eye that can see as well as look. The author says in the brief preface: "Whenever opportunity occurs I take an outing, and the following pages are the outcome of two years of rambling."

The book will have a special charm for those who are fond of natural objects, such as the fields and woods and rivers disclose, and every reader may derive enjoyment from its pleasant pages. The leading trait of the author, as indicated by this volume, is an ardent love of nature. He is one of her devotees. To him a sweet and holy privilege, and the fascinating experience kindles his fervor and rouses his enthusiasm. These entertaining pages typify that fervor and attest that enthusiasm, and they present a record of keen observation coupled with a happy faculty of description. We seem to hear the splash of oar, the song of bird, and the solemn moan of the woods. The fields tell their simple story, and the rippling waters repeat their artless tale. Here is one who "finds tongues in trees, books in the running brooks, Sermons in stones and good in everything."

THE JEWEL CASKET. There is no question of the superior place emeralds now hold. An emerald stone in an oblong silver box is one of the fall novelties. Clear leaf pots of green enamel with diamond veining are conspicuously seen. A riviere of diamonds turning through diamond buckles is a novelty in necklaces. Large slabs of nephrite gold, with an amethyst, gold tipped arrow run through, are lovely ornaments for the hair. Hatpins of aquamarine and of corn flowers in enamel are new. Black hatpins are flower shaped with gold centers. A necklace with a square fluted clasp is made up of small chains divided into sections by small pearls. It is a becoming design.

Who are to wear the rings with watches for settings? They are so handsome and beautiful that somebody must be expected to buy them. A decided novelty is a huge worm made from a rounded section of pearl with a green head and bars of green enamel dotted with tiny diamonds. A fish-shaped ring is made from an oblong piece of pearl, with the head, fins and tail worked out in small diamonds. It is a stunning appendage to the toilet. A beautiful ornament was seen in a cluster of roses in dull red and gray enamel, with the edges of the petals incrustated with diamonds. The foliage was in oxidized gold—jewels for the season.

WHOLESALE VEGETABLES. Tomatoes get upon the liver. Asparagus purges the blood of impurities. Spinach has a direct effect upon the kidneys. The common dandelion, used as greens, is excellent for the kidneys. Lettuce and cucumbers are cooling to their effects upon the system. Celery acts admirably upon the nervous system, and is a cure for neuralgia and rheumatism. Red onions are an excellent diuretic, and the white ones are recommended to be eaten raw, as a remedy for leprosy. However delicious mothers may be about the health and comfort of their little children they cannot prevent them from contracting group and whooping-cough. But while they cannot prevent their troubles they can readily cure the little ones with Dr. Bull's Cough Syrup. He thoroughly believes in it. Mr. A. J. Rutherford, General Book Bindery, Geneva, N. Y., writes: "I received a severe knock on the head from the only child, I applied Salveol Oil, and the best application removed all pain. It is the best thing for cuts, burns and bruises. I keep it both in my house and shop, and would not be without it."
